

Hercules Development

Next-Generation Hyperscale Data Center Platforms

Confidential, Company Presentation, April 2026

Executive Summary

Strategic AI/HPC solutions at speed

- Entirely new market, characterized by rapid development and change, **Primacy of Power**
- Due to the dynamics, speed of delivery is critical
- Hercules is an **Energy & Power-led data center developer** focused exclusively on hyperscale and AI workloads
We and solve Power as the primary bottleneck and we do it fast.
- 2+ GW of power pipeline in the US
- Average campus size: 1,000+ MW | Rapid speed-to-market in the industry (24–36 months energized)
- Proprietary “Power-First” development model: power capacity contracted before land
- Turnkey powered land + shell solutions; build-to-suit; wholesale powered leases
- Top tier suppliers, partners and EPC
- Single point of accountability: land, power, fiber, permits, design, and delivery
- World-class institutional capital partners
- Effective Government relations

The Hyperscale Capacity Crunch

The Market Challenge

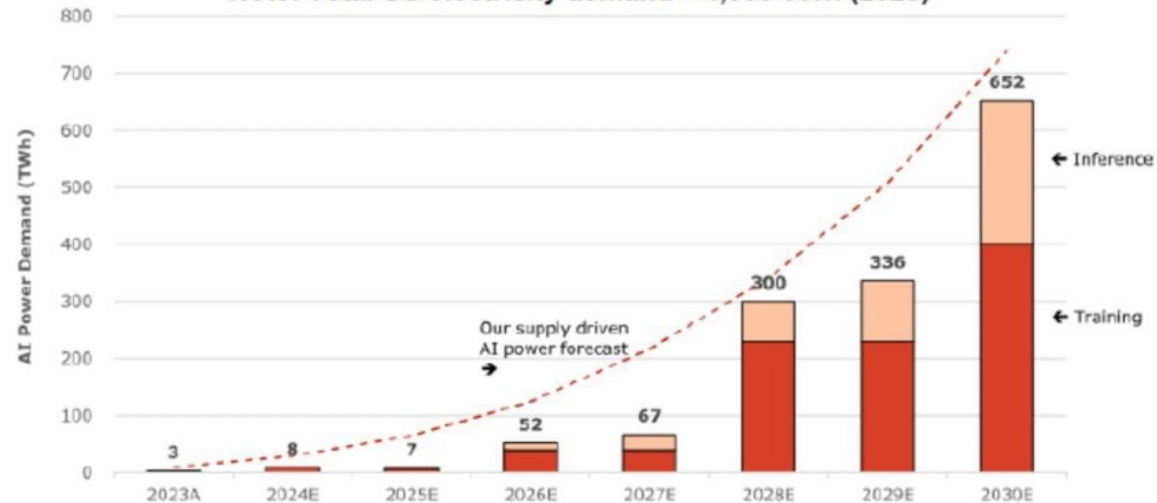

- U.S. hyperscale demand projected to exceed 134 GW by 2030
(S&P Global, McKinsey cites >80GW)
(AI training + inference driving 50–100% annual growth)
- Power availability is the #1 constraint:
 - 80% of suitable markets are power-constrained without significant upgrades
 - Hyperscalers increasingly constrained by utility timelines, not capital or demand
- Traditional development timelines (5–7+ years) no longer acceptable
- Hercules converts energy and power access into deployable AI capacity, *fast*

A Story in Two Images

Summary of GenAI demand forecast

Source: Wells Fargo

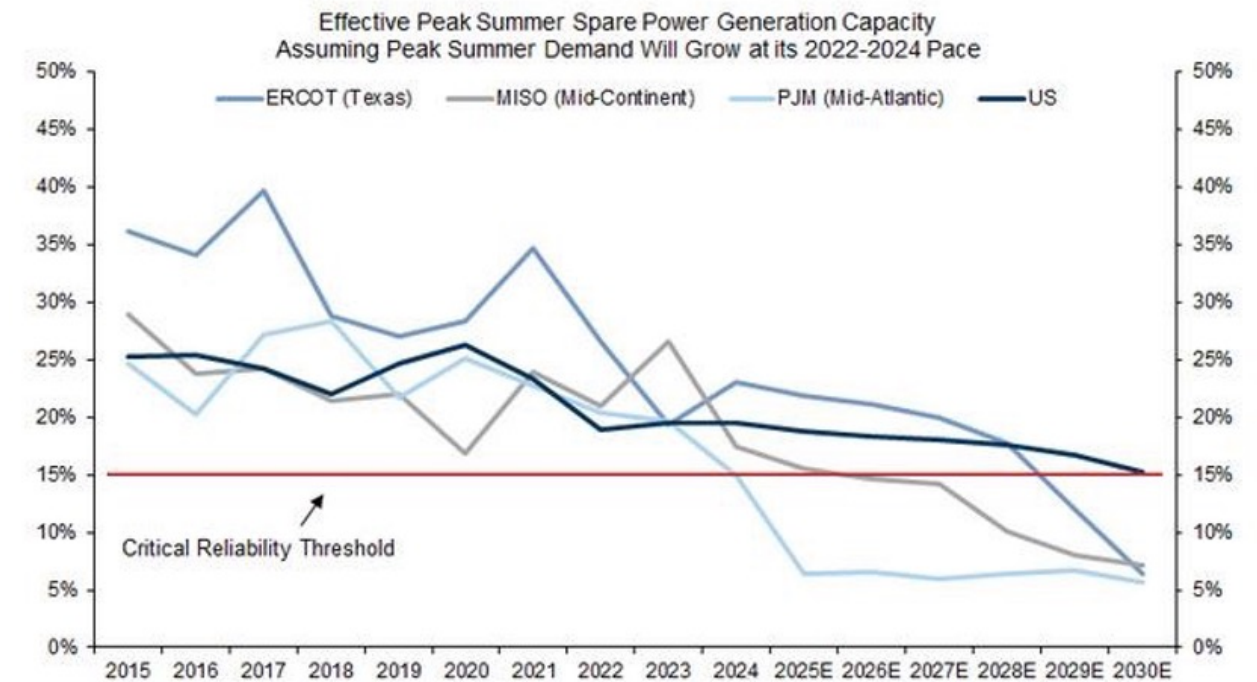

Note: Total US electricity demand – 4,000 TWh (2023)

	2023A	2024E	2025E	2026E	2027E	2028E	2029E	2030E
(+) Training power demand (TWh)	3	8	7	40	40	229	229	402
(+) Inference power demand (TWh)	0	0	0	12	27	70	107	250
Demand driven AI power forecast (TWh)	3	8	7	52	67	300	336	652
Supply driven AI power forecast (TWh)	9	29	65	125	217	341	506	739

RenAIssance: The Paradigm Shift

Fundamental truths

- AI is bigger than most people can imagine, applications and demand signal are real
- Compute is the core, but POWER is everything
- Nat Gas is currently the only viable energy source to drive power (so you have to really understand it, know how to get it)
- SMRs are 7-10 years away from making a dent
- From a NAT SEC or commercial perspective: Speed is Critical
- Sector is so new and dynamic you need cross-disciplinary chops and a frontier mentality
- Success drivers: Strategy, People and Posture build Reputation
Anticipation based on knowledge, Problem solving based on Experience, Strong relationships, and absence of egos/drama queens

Who We Are

Company Overview

- Founded 2025 by energy, power and AI experts, the team includes ex-hyperscaler, real estate, power, energy and investment banking executives
- 20+ professionals across power origination, real estate, engineering, construction, project management, government relations and finance.
- Supported by a powerful ecosystem of partners and class-leading capabilities.
- Exclusive focus:
 - (a) 275+ MW data center opportunities on 1GW+ campuses for Tier-1 cloud & AI operators and select clients that include USG (DoW)
 - (b) Smaller rapid stand up/in-fill opportunities: 10-100MW in key MSAs
- Development partner of choice for clients that need comprehensive solutions, fast.
- Investment-grade rated offtakers only — zero speculative development

The Hercules Advantage:

Power-First Development

Our Differentiated Model

1. Secure power & transmission capacity early (multi-year process condensed to months)
2. Acquire contiguous land parcels in the exact substation footprint
3. Obtain permits & entitlements in parallel
4. Deliver energized, entitled, fiber-ready powered land on day one
5. Optimize for sites with gas infrastructure and capacity for BTM builds

Result:

- 100% power delivery certainty
- Shortest timeline in the industry: 24–36 months from LOI to 400 kV energized
- Campus sizes up to 1,000 MW on day one, expandable to 3+ GW

Portfolio & Pipeline Highlights

Current Portfolio (as of 5/1/26)

Controlled Sites in Development (>2 GW total)

- South Carolina 1 – 33 MW (Phase 1 energized Q4 2026)
- Florida 1 – 250-300 MW (Phase 1 2026–2027)
- Virginia 1 – 250-1,000 MW (Phase 1 2027)
- Alaska 1 – 400 MW (Phase 1 2027)

Current “Pre-Pipeline”* (2027–2030 delivery)

- 8 campuses across 8 markets
- Average size 1GW+, Will have grid and/or BTM
- Multiple 1 GW+ single-tenant opportunities will be available

All sites selected for latency, fiber density, proximity and capacity of energy infrastructure, water availability, favorable regulatory treatment and community support

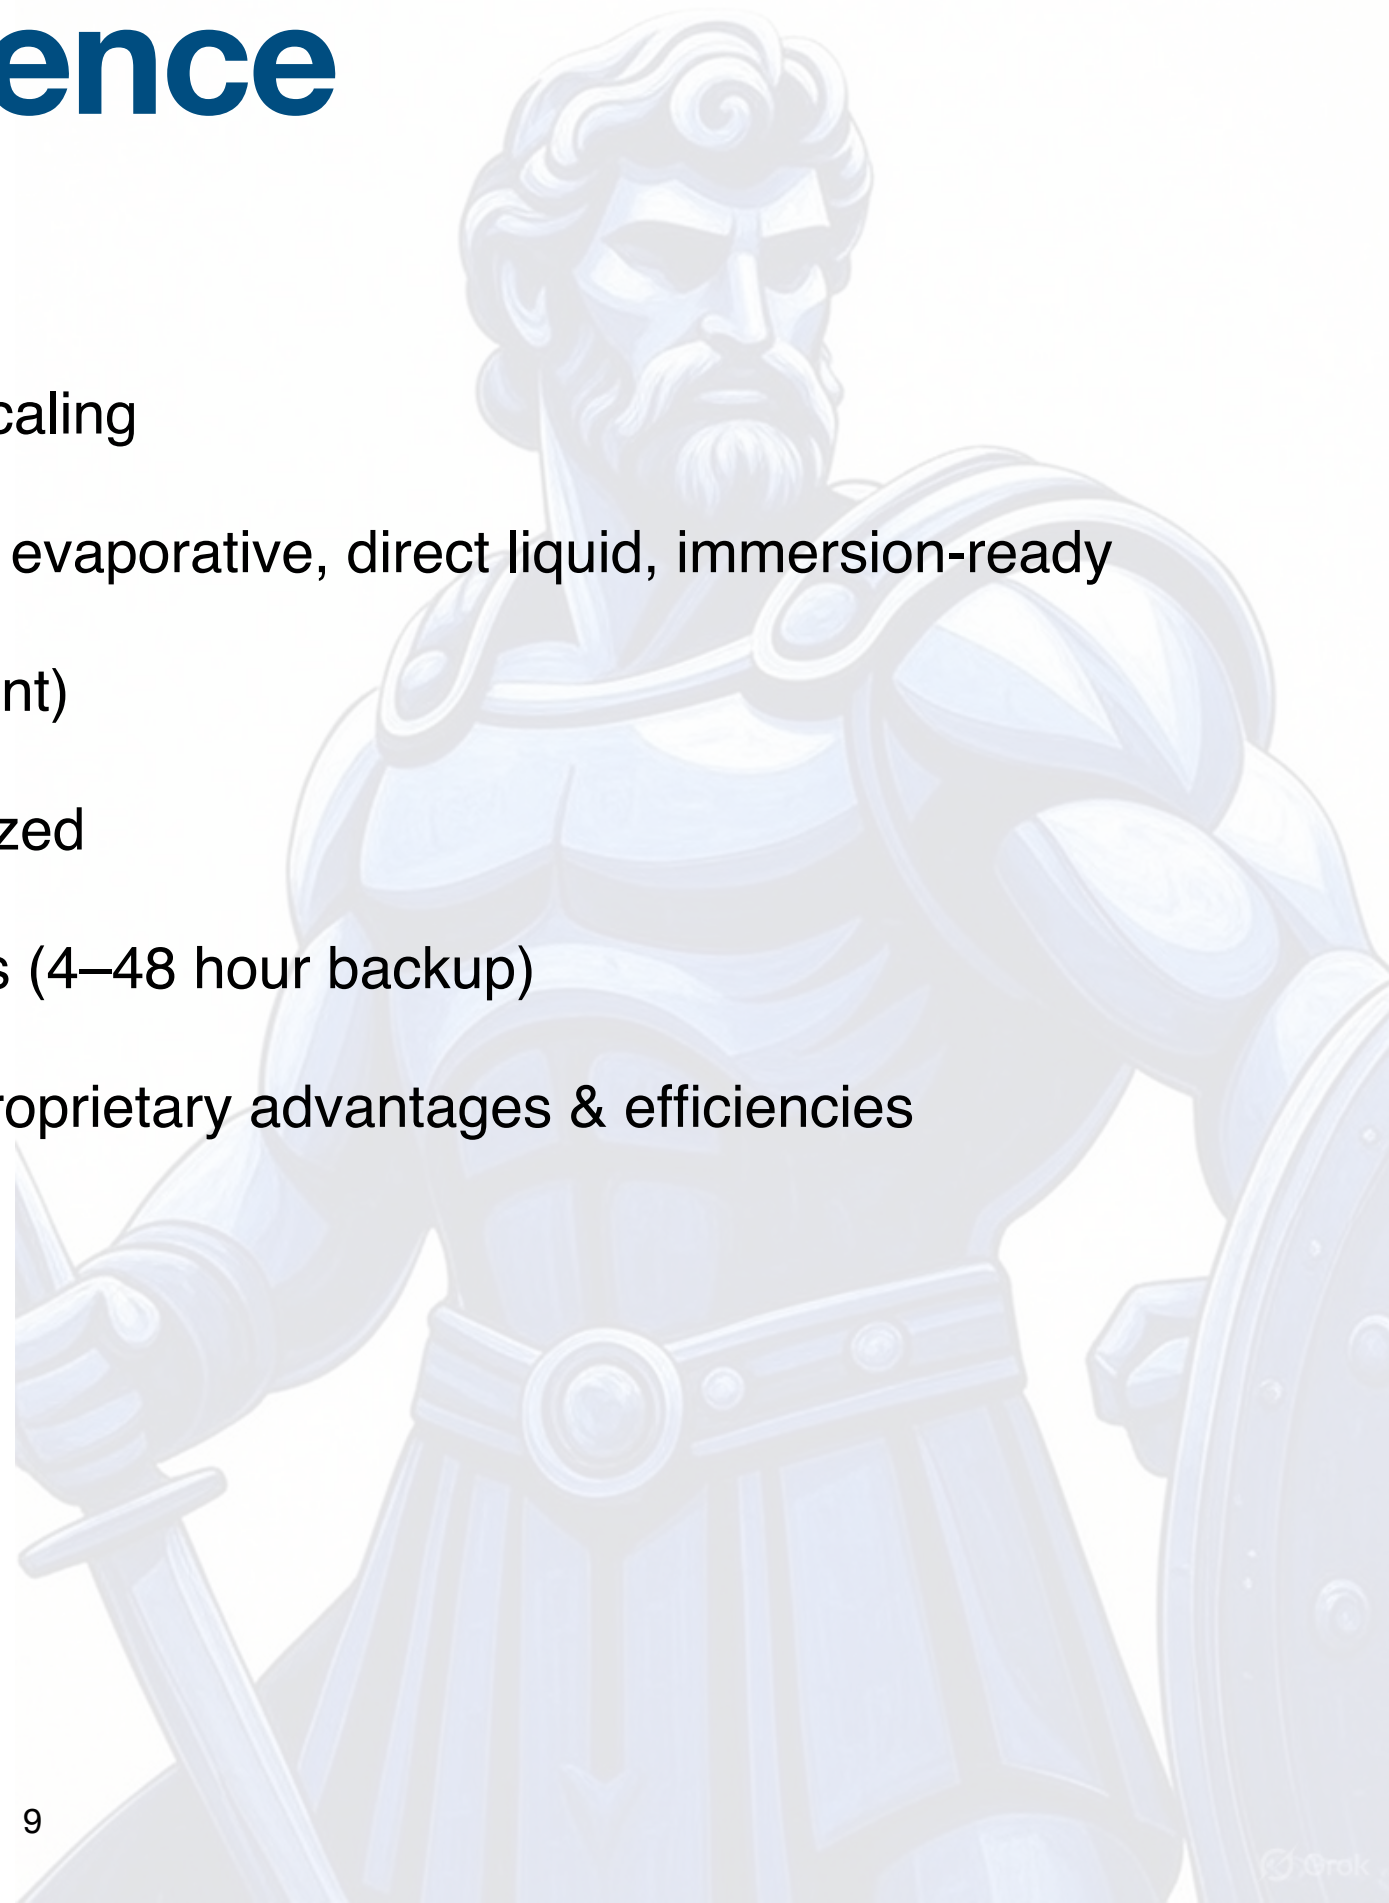

*Pre-pipeline defined as in advanced negotiations, expected to be confirmed in Q3 2026

Technical Excellence

Designed for AI Density

- Infrastructure designed for long-term AI scaling
- Multiple cooling architectures: air, indirect evaporative, direct liquid, immersion-ready
- Typical PUE 1.08–1.15 (location dependent)
- Water Usage Effectiveness (WUE) optimized
- Campus-level microgrid & storage options (4–48 hour backup)
- Unique technologies and processes for proprietary advantages & efficiencies

Built for the exascale era.

Delivery Options & Commercial Flexibility

Flexible structures for alignment with customer & capital

- Powered Land Lease (you build)
- Turnkey Shell (we deliver energized building + MEP)
- Build-to-Suit Full Turnkey (design-build-operate)
- Wholesale Powered Lease (long-term capacity contracts)
- JV opportunities if the partnership rationale is there

Structures typically include:

- Fixed power pricing with pass-through options
- Expansion opportunities
- Single master agreement across multiple campuses globally (if applicable)

One partner, one contract, global scale.

Summary & Next Steps

Why Hercules?

- Integrated partner across power origination, land, delivery and capital structuring
- Large secured pipeline of power potential (2+ GW)
- Rapid delivery: 24–36 months to energized high-voltage GIS
- Designed from the ground up for 100+ kW AI workloads
- Single accountable partner for your global capacity needs

Let's do something powerful
